

MultiCon

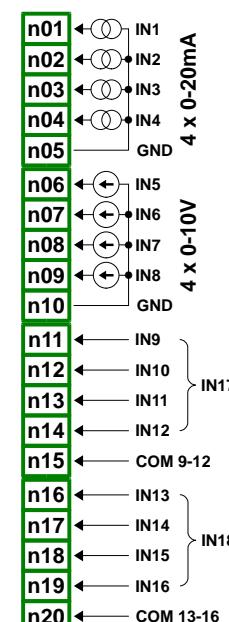

Input modules - voltage/current/digital

- UI4D8: 4 voltage + 4 current + 8 digital inputs
- UI8D8: 8 voltage + 8 current + 8 digital inputs

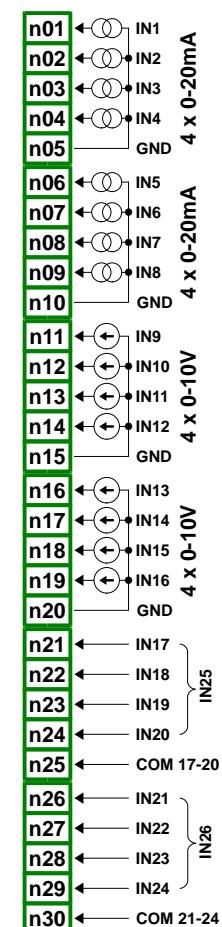

The MultiCon UID modules include 16 or 24 voltage / current / digital inputs, which allows to measure current and voltage and can be equipped with uninsulated digital inputs. Inputs are gathered into groups to make connection easier. All ground terminals of a particular module are common, but separated from power supply and other modules. If it is necessary to make measurements with different ground potentials, several UID modules have to be installed into MultiCon unit.

MODULE PIN ASSIGNMENT

UI4D8
4 voltage + 4 current
+ 8 digital inputs

UI8D8
8 voltage + 8 current
+ 8 digital inputs

Voltage / current inputs parameters are:

- Name - read-only input name given by the device,
- Unit - read-only field which displays unit of measurement („mA”, „V”),
- Mode - defines measurement range,
- Low limit - defines measurement level below which in logical channel „Lo” state will be displayed,
- High limit - defines measurement level above which in logical channel „Hi” state will be displayed.

Digital inputs parameters are:

- Mode - defines input voltage ranges (TTL: „0” for $0 \div 0.8V$; „1” for $2 \div 5.5V$ and HTL: „0” for $0 \div 4.2V$; „1” for $11.5 \div 30V$),
- Filter time - defines minimal time that has to elapse from last input state change, if this change wants to be noticed. Each input has the possibility to set its own Filter time, even if this input is part of another, different set of this parameter do not disturb their work.
